Child & Adolescent Services

Our one-on-one approach with each individual allows us to solely focus on your child's needs. By tailoring to their issues, we are able to create a treatment plan specific to your child.

Our approach includes a behavioral health assessment and individual therapy, as well as classroom and school-based observation.

Effective treatment can result in improved school performance and social interactions, and an overall better outlook on life.

Adult Services

Greater Elgin Family Care Center provides mental health therapy services to patients 12 years and older.

It is important for our patients to know they are not alone. Approximately 20% of adults live with a mental health disorder and a majority of these adults do not seek treatment.

The goal of our team is to better the life of each patient in order to improve their overall happiness. In doing so, we strive to work together with the patient in seeing that they can better deal with the stress and demands of everyday life.
